Spring (March 20 - June 20)
Summer (June 21 - September 21)
Squash vine borer adults emerge from cocoons in the ground 900-1000 DD
Mated Squash vine borer adult females begin laying eggs at the base of plants 1000-1200
Eggs hatch and larvae begin boring into vines, leaving behind tiny frass mounds around their entry point.
SQVB larvae feed for 4-6 weeks
Larvae exit the stem and tunnel into the ground to pupate. feeding
Phenology information based on University of Wisconsin Cooperative Extension. Karen Delahut, Author.
